SAFE, SIMPLE, SECURE

Part of the MANAGED AGREEMENTS

Fastman Extended ECM for Docusign

# From signed to stored, automatically.

Simplify eSignatures with end-to-end automation on OpenText Content Management.

**Fastman Extended ECM for DocuSign provides a secure and fully embedded solution for managing electronic signature processes directly within the OpenText™ Content Management.**

It enables users to send, monitor, and archive DocuSign envelopes without leaving the Business Workspace, ensuring that documents remain governed, traceable, and stored in the correct context throughout the signing lifecycle.

## Why Extended ECM for Docusign?

E-signatures are essential in modern business, but without integration, they often lead to disconnected workflows and governance risks. Fastman's solution brings it all together by:

- **Embedding e-signature workflows into business processes.**
- **Ensuring signed documents are stored and governed in context.**
- **Reducing turnaround times for contracts, approvals, and agreements.**
- **Providing full visibility and auditability of signature status.**
- **Freeing IT from manual integrations or ad-hoc workarounds.**
- **Supporting compliance with industry and regulatory standards.**

# Key features

## Native integration with OpenText ECM

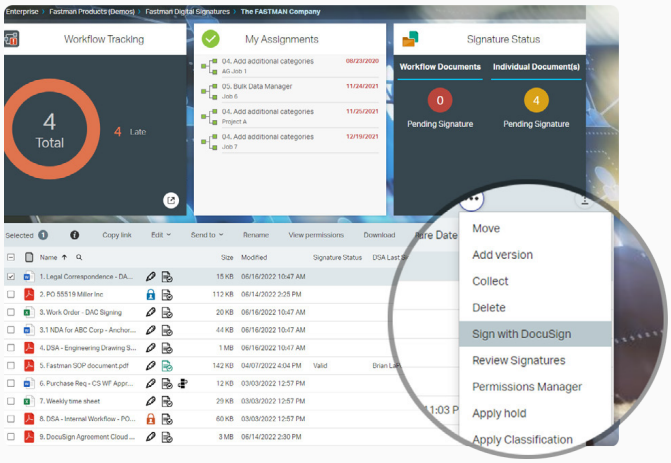

Documents can be sent for signature from anywhere within your OpenText repository. All contextual metadata is preserved and carried through the signing process. Users do not need to leave the ECM interface or manually export documents to initiate the process.

## End-to-end envelope management

The solution automatically tracks envelope status, retrieves signed documents, and stores them in the appropriate workspace or folder. Signed files are retained as new versions or copies of the originals, preserving audit trails and maintaining consistency across the content lifecycle.

## Support for advanced DocuSign features

Extended ECM for DocuSign enables a wide range of DocuSign capabilities, including sequential and parallel signing flows, template-based envelopes, anchor tags for signature placement, and multiple account handling.

## Security & compliance readiness

The solution includes advanced eSignature options such as EU Qualified Signatures and AI Identity Verification to help meet strict legal, security, and regulatory requirements.

# A complete E-signature service

**Fastman doesn't just provide the integration - we deliver a complete e-signature enablement package. From deploying the Extended ECM for DocuSign connector, to configuring signing workflows, to managing your organization's DocuSign licenses, Fastman acts as your trusted partner.**

Our Managed Signature Agreements service ensures you have everything needed for a successful, secure, and compliant e-signature rollout across the business.
