Fastman

SAFE, SIMPLE, SECURE

Part of the **MANAGEMENT SUITE**

Fastman Bridge Connector

Automate and orchestrate your OpenText data moves.

Easily coordinate complex data transfer - cut costs, save time and eliminate manual errors.

Fastman Bridge Connector simplifies the migration and reorganization of content within OpenText™ Content Management by allowing teams to move content from one location to another - safely, efficiently, and without custom scripting.

Designed for internal use cases such as departmental restructuring, project archiving, and workspace consolidation, the tool ensures that content integrity is preserved while allowing administrators and business users to oversee and participate in the process.

Why Fastman Bridge Connector?

Moving content manually between ECM locations is time-consuming and error-prone.
Bridge Connector helps organizations by:

Automating internal migrations to reduce human error and save time.

Offering intuitive monitoring through live dashboards to track job status and assignments.

Increasing collaboration and control, letting multiple users prep metadata and categories across projects.

Removing the need for costly scripts - works out of the box to streamline operations.

Key features

Automated internal migrations

Move content from one or more ECM locations to another while updating or preserving metadata, permissions, categories, and folder structure. Useful for reorganizing repositories, merging departments, or archiving project content.

Live dashboard for monitoring and control

A visual dashboard provides real-time visibility into job progress, assigned tasks, and execution steps. Business users and administrators can track jobs, identify issues, and ensure quality control at every stage.

Multi-user collaboration and metadata management

Bridge Connector supports decentralized input, allowing multiple users to update metadata, assign categories, or flag content for movement. This helps teams work together efficiently, even on complex projects involving large volumes of content.

Workflow integration with Fastman tools

The connector can launch Bulk Data Manager or Permissions Manager directly from workflow steps, allowing teams to execute attribute updates, permission checks, or metadata edits in parallel with move operations.

No scripts, no custom development

Bridge Connector is ready to deploy out of the box. There's no need to write or maintain migration scripts - reducing project setup time and eliminating common sources of error.

Part of a complete Information Governance strategy

Fastman Extract Tool is part of the Fastman Management Suite - a collection of advanced solutions designed to streamline governance, control, and administration of OpenText Content Management.

From permissions and access to bulk data updates and e-signature integration, the suite helps reduce IT workload, improve compliance, and empower business users across the content lifecycle.
