

Fastman Management Suite

One information governance suite to simplify control, streamline processes, and empower users with self-service tools.

Fastman Management Suite is a comprehensive collection of solutions designed to streamline the day-to-day operation, governance, and scalability of OpenText™ Content Management. It empowers business users to manage permissions, metadata, document access, user actions, and content lifecycle policies through intuitive, purpose-built tools that require no custom development or scripting.

Whether you're migrating legacy data, enforcing security and compliance policies, or supporting decentralized content ownership, the suite provides the control and transparency needed to maintain a clean, compliant, and high-performing ECM environment - on-premises or in the cloud.

Why Fastman Management Suite?

Managing enterprise content effectively is challenging. Without proper governance, systems can become cluttered, unsecured, and inefficient.

Fastman Management Suite solves this by:

Automating repetitive tasks to reduce administrative overhead and eliminate manual errors.

Enforcing structured metadata and permission models across repositories and departments.

Maintaining data quality with validation, version control, and audit logging.

Improving compliance posture with tools designed to align with internal policies and external regulations.

Empowering business teams with self-service tools that reduce dependency on IT.

Supporting hybrid environments, including on-premises, private cloud, and cloud-native deployments.

A complete bundle

Permissions Manager

Centralize and streamline the management of complex permissions structures with advanced analysis, editing, and bulk update capabilities.

Permissions Manager for Outlook

Enable business users to request and manage permissions directly from Microsoft Outlook, reducing dependency on IT and improving responsiveness.

Access Manager

Define and enforce access control policies across your content environment to ensure users only see what they are meant to see.

Time-Based Access

Grant temporary access to sensitive content for defined periods, automatically revoking permissions after expiry to support security and compliance.

Bulk Data Manager

Empower business users to perform bulk updates and migrations of metadata, classifications, permissions, and more—without scripting or IT involvement.

Bulk Data Manager for Core

Extend bulk data management capabilities to OpenText Core Content, enabling consistent governance and data integrity in the cloud.

Extract Tool

Safely extract and export large volumes of content and metadata from Content Suite for archiving, audit, migration, or integration purposes.

Bridge Connector

Seamlessly move and transform content between OpenText environments or third-party systems using configurable templates and rules.

Your partner in Information Governance

Fastman is a trusted provider of Content Management information security solutions, with almost 20 years of experience in this field. Fastman offers a unique combination of technological capabilities and expertise in OpenText and SAP Content Management products that are unmatched in the market. Its tools enhance the functionality helping clients manage their data more effectively, automate manual tasks, and reduce the risk of errors.

Fastman's customer service is exceptional, with ongoing support and training to ensure clients can use its products and services effectively.
